Yearly Charity Newsletter

The Eagles Mikisew Charity was founded in 2019. The purpose of this charity is to advance land based education through providing resources to schools.

A huge thank you to our anonymous donor who has been generously donating each year to make this happen. This year they donated \$18,000 towards the charity with \$12,000 of it going towards bursaries for the students.

The rest will be used towards land based education which we and the anonymous donor find very important. The charity has also received additional donations that have contributed to making this charity a success and for that we thank you. All indigenous high school students in Manitoba are welcome to apply for these bursaries through our website.

The past two years have been a challenge in the face of Covid-19. The amount of applications have decreased as students seem to be uncertain if they will proceed with post-secondary education during these unprecedented times.

We hope that our indigenous youth continue their education and find a career they enjoy. As Confucius once said "Choose a job you love, and you will never have to work a day in your life".

Liz Kornelson

A big thank you to Liz Kornelson who kindly donated \$500.00 to the charity to be used toward land based education specifically towards the Riverwatch land based education field trip.

Golf Tournament

Our first annual golf tournament in 2020 was a huge success, unfortunately due to Covid-19 we have been unable to host another. However, this year we are hoping to continue with our 2nd annual golf tournament! Stay tuned!

Riverwatch Land Based Education Field Trip

On October 18, 2021, Mr. Brown from Southeast Collegiate took the grade 10 science class on a Riverwatch field trip. It was a beautiful day on the La Salle River where they learned more about aquatic ecosystems and freshwater bodies. In addition, two University of Manitoba students, Dylan Kensick and Taylor Galvin accompanied and gave lessons on water. Dylan and Taylor are knowledge keepers. The students were given traditional medicines to keep and participated in using equipment to test for different solutes and taught how they affect water quality. The student who wished to smudge before the knowledge keepers teaching did so by the water.
